

Television and Media Production I

In this course, students explore video technology and examine television as information media. Students learn the basic principles of video production, media literacy and legal aspects through classroom discussions, video screenings and actual hands-on activities. As they work through the production process (pre-production, production, post-production), students learn techniques in videography, editing, audio production, scriptwriting and on-camera performance. Students also gain experience in computer graphics, special effects applications and other techniques related to video production.

High School Credits: 1

School Level: High School

Grade: 9, 10, 11

Program: CTE: Trade and Industrial Education
