

Electronics Systems I

Designed for students who wish to pursue careers in computer technology, electronic engineering or a related field, this course introduces electronic terms and components. Using algebraic formulas, students solve electronic circuit problems. They compare AC voltages to DC voltages and component reaction in each, use common electronic test equipment, and learn soldering techniques, circuit requirements and problem-solving skills. Students develop skills by constructing sample circuits, as well as by building several projects from the circuit board to completion. This course may be used as an introductory course to computer engineering, computer science or computer technology maintenance and repair.

High School Credits: 1

School Level: High School

Grade: 10, 11, 12

Program: CTE: Technology Education
